

Subject: [Job Title] Application - [Your Name]

Dear **[Hiring Manager's Name or "Hiring Team"]**,

With nearly two decades of experience in software development and over **12 years architecting SRE** and platform engineering solutions, I was thrilled to see the **[Job Title]** opening at **[Company Name]**. My background in designing, scaling, and optimizing large-scale distributed systems, particularly on **[Mention 1-2 key technologies from the job description, e.g., AWS, Kubernetes, GCP]**, aligns directly with the challenges and opportunities outlined in your job description.

At **Nokia**, I demonstrated my ability to handle complex infrastructure at scale by orchestrating the zero-downtime migration and operation of **1000+ Edge Kubernetes clusters and 15+ Data Center Kubernetes clusters across 5 global locations**. I architected and operated this highly available platform spanning both **on-premise and AWS EKS**, leveraging Infrastructure as Code (**Terraform, Helm, Python**) and GitOps principles to ensure system resilience and efficiency. My hands-on experience with **Kubernetes, EKS, AWS, Terraform, Gitlab-ci, ArgoCD** would allow me to contribute immediately to enhancing and maintaining **[Company Name]**'s core infrastructure.

Beyond raw infrastructure, my focus is on optimizing the entire development lifecycle. I architected and implemented a standardized **CI/CD Tool, GitLab CI, Jenkins** workflow that **reduced deployment cycles by 50% and achieved 99.95% platform availability**. To support this, I designed and deployed a scalable observability stack using **Observability Tools, e.g., Prometheus, Grafana, OpenTelemetry, OpenSearch, VictoriaMetrics** which improved system reliability and led to a **5% reduction in infrastructure costs**. My experience leading a **15-engineer DevOps team** has also honed my ability to foster a culture of automation and proactive problem-solving. This work required deep cross-functional collaboration with teams across QA, Operations, R&D, Compliance, Security, Project Management, and Product Ownership, honing my ability to align technical strategy with business objectives and foster a shared culture of automation and proactive problem-solving.

I am particularly excited by the prospect of applying my skills at **[Company Name]**. **[Insert 1-2 sentences with specific reasons for your interest. This is the most important part to customize!]**

- **Example 1 (Product-focused):** "I am a user of **[Their Product]** and I'm impressed by its reliability. The opportunity to contribute to the SRE principles that power such a great user experience is very appealing."
- **Example 2 (Mission-focused):** "I am inspired by **[Company Name]**'s mission to **[state their mission, e.g., 'democratize financial data']**. I see a clear opportunity to apply my skills in building scalable and resilient platforms to help further that goal."
- **Example 3 (Tech-focused):** "The technical challenges described in the job post, such as **[mention a specific challenge like 'scaling multi-region infrastructure' or 'improving developer velocity']**, are exactly the types of problems I am passionate about solving."

My resume provides further detail on my technical qualifications and accomplishments. I am confident that I possess the skills and strategic mindset to make a significant contribution to your team and am eager to discuss my application with you further.

Sincerely,

Narendranath Panda
