Hiring Team

Miratech

Subject: Junior Cloud Infrastructure Engineer Application – Narendranath Panda

Dear Hiring Team,

With extensive experience managing 1000+ edge Kubernetes clusters, OpenStack-like private cloud platforms, Ceph storage, Ansible/Terraform automation, and Prometheus/Grafana observability across global data centers, I'm excited to contribute to Miratech's OpenStack-based private cloud infrastructure.

Direct Experience Match:

- **OpenStack & KVM:** Architected highly available data center Kubernetes platforms (on-prem & EKS) with Ubuntu KVM hypervisors and Ceph storage across 15+ global locations
- **Infrastructure Automation:** Deployed Terraform, Ansible, and Helm for provisioning 1000+ edge clusters with zero-downtime operations
- **Observability:** Built Prometheus/Grafana/Loki/OpenTelemetry stacks monitoring mission-critical multi-tenant infrastructure
- **CI/CD & GitOps:** Implemented GitLab CI/ArgoCD pipelines supporting infrastructure upgrades and rollbacks
- **24/7 Operations:** Led global on-call rotations troubleshooting Linux, storage, networking across production environments

My hands-on expertise with Ceph, Kubernetes cluster operations, Data Center infrastructure, and Linux administration (Ubuntu/RHEL) directly supports your OpenStack private cloud requirements.

My CV details these accomplishments. Eager to enhance Miratech's cloud platform reliability and scalability.

Best regards,

Narendranath Panda

R&D Architect, Nokia
