SRE Hiring Team

Parity Technologies

Subject: Site Reliability Engineer Application – Narendranath Panda

Dear SRE Hiring Team,

With 19+ years architecting Kubernetes platforms at scale (1000+ edge clusters) and expertise in Terraform, ArgoCD, GitHub Actions, Docker, and observability stacks (Prometheus, Grafana, Loki), I'm excited to apply for Parity's SRE role supporting Polkadot infrastructure.

At Nokia, I:

- Architected Terraform/Helm-managed AWS EKS platforms ensuring 99.95% availability across 15+ data centers
- Built GitLab CI/ArgoCD pipelines cutting deployment cycles by 50%
- Deployed observability stacks (Prometheus/Grafana/OpenTelemetry) reducing infra costs 5% while defining SLOs
- Led 15-engineer DevOps team through global 24/7 on-call rotations

My Python automation and cross-functional leadership directly support Parity's GCP/Kubernetes CI/CD goals for Rust/Python blockchain workloads. Eager to ensure Polkadot's production reliability.

My CV details these accomplishments. I'd welcome discussing how my SRE experience accelerates Parity's Acceleration department.

Best regards,

Narendranath Panda

R&D Architect, Nokia
